

Memex

Business needs

Your business needs

Too often in procurement projects, business needs are sacrificed in the name of technical and procurement expediency. In the case of IT solutions, technical limitations can often define and control deliverables, with too little thought about the operational challenges facing frontline managers and officers.

At Memex Technology, we believe that the tail should never wag the proverbial dog and that, even in challenging economic times, your wider business needs should be the priority. That's why Memex® provides solutions that fit with the customer's strategic and operational processes, providing users with the tools they want and need.

At a UK force-wide level, we fully understand the importance of aligning IT procurement with the Information Systems Improvement Strategy (ISIS) model. An example of this is Memex's market-leading Management of Police Information (MoPI) tool which provides the integral functionality that allows forces to meet their statutory requirements as part of everyday management processes and workflow.

One technology doesn't fit all – customisation is key

We also recognise that all police forces have unique business processes and needs. The Memex solution is flexible and configurable enough to ensure continuity of business processes and to enable full compliance with the ISIS model. This built-in flexibility is also critical in supporting the integration of disparate systems and different business functions in complex multi-geography implementations.

Memex and business needs:

- ISIS compliant e.g. MoPI module
- Flexible structure
- Modular to meet individual forces need
- Can interrogate and manage multiple data sources
- AGILE – support public sector procurement realities
- Partner approach means Users at heart of specification and build

Memex - Flexible, Scalable, Intelligent

Able to deal with multiple data sources and formats

Memex solutions are able to gather, analyse, disseminate and manage large quantities of intelligence-related data whatever their format or location. Our proven platform technology ultimately takes the pain out of data migration, allowing forces to automatically integrate with and retain access to all legacy systems.

Agile development for agile pricing

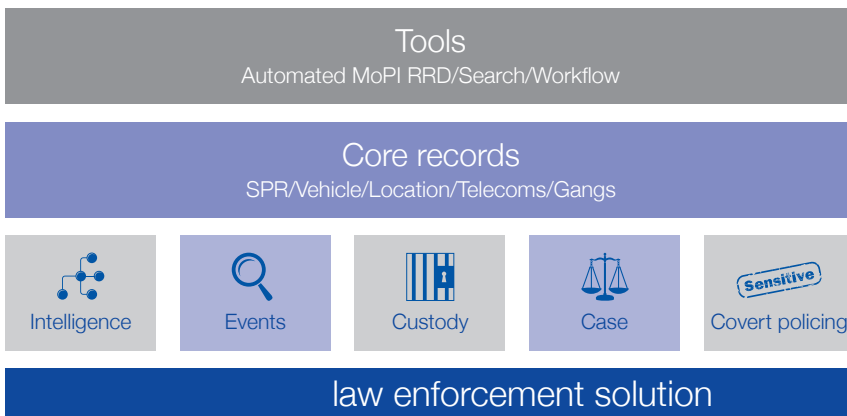

Memex understand that the dynamics of public sector tendering can potentially result in scope of tenders becoming fixed and outdated before implementation is completed. So Memex adopt the 'Agile' approach to the design and development of solutions that can be quickly re-configured to accommodate changing business requirements.

Understanding requirements specific to your force

All Memex UK police solutions have been designed in partnership with police forces and managed by our own police and security experts – key members of the Memex team who have decades of operational and frontline experience within UK police forces.

Working with a customer's subject matter experts, IT project managers and other stakeholders, these Memex personnel understand the operational perspectives and challenges facing the modern police force. This expert knowledge of the dynamics of UK policing is built on two decades of successfully meeting the needs of UK and international law enforcement customers

Memex Technology: We understand how to utilise your force's experience and expertise to ensure all user requirements are met.

**Mark Crowley,
Chief Constable**

“Surrey is already one of the most efficient police forces with one of the lowest rates of crime in the country” said its Chief Constable, Mark Rowley. “The new enterprise system will help us to maintain that status by increasing our ability to deliver our business with the benefit of a comprehensive knowledge of the issues in hand, improving service and reducing risk to public and police and maintaining Surrey’s status as one of the safest places to live”
